

ABSTRACT

A method of automatically changing the setting of user setting menu options at a time in a mobile terminal. A user selects user setting menu options and registers them as setting categories in connection with setting values in a scheduling setting group. A scheduling timer is set to a timing value for providing timing for changing the settings of the selected user setting menu options and activates the scheduling timer when a scheduling setting mode is set. The settings of the user setting menu options are changed to the setting values of the setting categories at the expiration of the scheduling timer.
